RISE Conference

Conference Internet At Its Best

Challenges and Solutions

RISE, the first start-up conference in Asia, has emerged as one of the world's renowned start up events. The conference provides a meeting place for tech start-ups and leaders of enterprises around the world to raise their profile, congregate and talk about how they are changing people's lives.

As a technology-oriented conference, RISE needed high performance Internet connectivity in order to satisfy its speakers, exhibiting start-ups and attendees. With thousands of participants from around the world attending, the seamlessness of their networking via a reliable and stable Internet infrastructure with high-powered Wi-Fi capabilities was key.

Hundreds of exhibition stands, 8 stages for holding talks, and countless sections for workshops and roundtables needed to be connected. Preparing for such a large scale event required professional support and expertise for onsite set up. The ideal solution was HKBN Dedicated Internet Access (DIA) with full Wi-Fi convergence, backed by its onsite technical support team throughout the event.

Network Set-up for Large Events

Working closely with HKBN during set up, RISE was assisted by the experienced technical team onsite every step of the way to establish Internet access. Any hiccups along the way were quickly and efficiently addressed by the technical team to RISE's professional expectations. Ultimately, the fast and secure network provided supported all the talks scheduled, including video streaming and instant wireless product demonstrations at the exhibition stands. With the support of HKBN DIA service, the 3-day RISE Conference 2016 was successfully held, attracting over 8,000 participants from 88 countries.

Use of HKBN Solutions

- 1G Dedicated Internet Access (DIA) service for product demonstrations and video streaming at RISE
- Full Wi-Fi Convergence for instant wireless product demonstrations to tech start-ups and professionals
- Onsite Technical Support to support and resolve issues in the Internet infrastructure
