

Infinite Backup

Comprehensive data protection with reliable and secure backup

Business data is paramount to all companies; a lot of time, money and effort is spent in developing a database. The loss of data due to virus, ransomware, theft, environmental impact, hardware failure and accidental deletion can have a detrimental effect on business, a company's reputation, and even its potential to grow. Highly cost effective, HKBN Infinite Backup is an advanced agent-based cloud backup solution for SMB customers that provides data protection for desktops and notebooks.

Data in desktops and notebooks are transferred to backup server for data backup or restore.

Continuous data protection

HKBN Infinite Backup's advanced continuous data protection (CDP) technology captures every version of a file that has been saved to the hard drive. This provides a highly dependable means of real-time, continuous data protection for desktops and notebooks in an effortless and transparent way, without any need for human intervention.

Through HKBN Infinite Backup, data is copied, compressed, 256-bit encrypted and transferred to the cloud located offsite, with Secure Sockets Layer (SSL) technology optionally available for enhanced security. Backed up data can be restored to their original formats, in just a few steps.

World class standard

Data is stored in a Tier 3+ data centre with world class international recognition which includes:

- ISO 27001 : 2005
- ISO 14001 : 2004
- 20000-1 : 2005
- FISC
- TIA-942
- Level II Security Guidelines issued by HKSAR Government

Service Requirements

Major Common Platforms

- Windows Vista, 7, 8, 8.1, 10
- Mac OS X 10.7.3, 10.8, 10.9, 10.10

Hardware

- Memory: 128MB (minimum)
256MB (recommended)
- Disk Space: 110MB

Features & Advantages

Super Secure Encryption	All data is compressed and 256-bit encrypted with an encryption key selected by user. Data backup through a secure SSL channel is optionally available to further increase the level of security.
Offsite Protection	As data is stored in a remote facility, data will not be affected by malicious threats and is readily available for restore
Fully Automatic	Data backup is automatically run on schedule with no error-prone human intervention required after initial setup. Log reports are provided to ensure the operation is performed as planned.
Fast Backup Applications	Backup agent is equipped with all speed optimizing technologies, such as multi-threading, In-File Delta, fast indexing, small files optimization, etc.

Address Your Business Needs For

- **Cost effectiveness** flexible monthly subscription and no upfront investments
- **Access anytime, anywhere** performs data backup and restore simply through the Internet
- **Flexible backup schedule** minimizes possible impact on business operation
- **Prompt technical and maintenance support** handles any problem efficiently and on time
- **Real time status monitoring** provides backup and restore progress, error and warning reports at a glance for monitoring and troubleshooting
- **Robust restorability** built-in cyclic redundancy checking (CRC), verification and rectification for data integrity
